

Write a Java program to read a text file and count:

- **Number of lines**
- **Number of words**
- **Number of characters .**

```
package IO_Filehandling;
```

```
import java.io.BufferedReader;
```

```
import java.io.BufferedWriter;
```

```
import java.io.File;
```

```
import java.io.FileReader;
```

```
import java.io.FileWriter;
```

```
import java.io.IOException;
```

```
public class Count_character {
```

```
    public static void main(String[] args) throws IOException {
```

```
        File f1=new File("Sample2.txt");
```

```
        f1.createNewFile();
```

```
        // Write File
```

```
        BufferedWriter bw=new BufferedWriter(new FileWriter("Sample2.txt"));
```

```
        bw.write("My name is Rahul. I am good boy.\n");
```

```
        bw.write("I am from Kolkata.");
```

```
        bw.close();
```

```
        BufferedReader br = new BufferedReader(new FileReader("Sample2.txt"));
```

```
        int count = 0;
```

```
        int countw=0, cl=0;
```

```
        String st;
```

```
        while((st=br.readLine())!=null)
```

```
        {
```

```
            cl++;
```

```
            System.out.println(st);
```

```
            String[] words=st.trim().split("\\s+");
```

```
            count = count+st.length();
```

```
            countw = countw+words.length;
```

```
        }
```

```
        System.out.println("Character count = "+count);
```

```
        System.out.println("Word count = "+countw);
```

```

        System.out.println("Lines count = "+cl);
        br.close();

    }

}

```

```

My name is Rahul. I am good boy.
I am from Kolkata.
Character count = 50
Word count = 12
Lines count = 2

```

Append Data to File Write a program to:

- Take user input
- Append that data into an existing file without deleting previous content .

```

package IO_Filehandling;

import java.io.BufferedReader;
import java.io.BufferedWriter;
import java.io.File;
import java.io.FileReader;
import java.io.FileWriter;
import java.io.IOException;

public class Append_file {

    public static void main(String[] args) throws IOException {
        FileWriter wr=new FileWriter("demo.txt", true);
        wr.write("\nPyth prog");
        wr.close();

    }

}

```

```

Java prog
Java prog
Java prog
Java prog
Pyth prog

```

Buffered Reader Usage Write a Java program to read a file using `BufferedReader` and print only those lines that contain the word "Java". .

```
package IO_Filehandling;
import java.io.BufferedReader;
import java.io.File;
import java.io.FileReader;
import java.io.FileWriter;
import java.io.IOException;
public class Word_contain {
    public static void main(String[] args) throws IOException {
        File file=new File("Sample3.txt");
        file.createNewFile();

        FileWriter wr=new FileWriter("Sample3.txt");
        wr.write("Hello Java\n");
        wr.write("How are you?\n");
        wr.write("Java: I am fine.\n");
        wr.close();
        BufferedReader br = new BufferedReader(new FileReader("Sample3.txt"));
        String l;

        while((l=br.readLine()) != null)
        {
            if(l.contains("Java"))
            {
                System.out.println(l);
            }
        }
        br.close();
    }
}
Hello Java
Java: I am fine.
```

Count Specific Word in File Write a program to count how many times a specific word (e.g., "Java") appears in a file.

```
package IO_Filehandling;
import java.io.BufferedReader;
import java.io.FileReader;
import java.io.IOException;
public class Word_repetition {
    public static void main(String[] args) throws IOException {
        BufferedReader br = new BufferedReader(new FileReader("Sample3.txt"));

        int count = 0;
        String wrd="Java";
```

```
String st;  
while((st=br.readLine())!=null)  
{  
    System.out.println(st);  
    String[] words = st.trim().split("\\s+");  
  
    for(String w : words)  
    {  
        String l=w.replaceAll("[^a-zA-Z]", "");  
        if (l.equals(wrd)) {  
            count++;  
        }  
    }  
  
    }  
  
    System.out.println("Word count = "+count);  
    br.close();  
}  
}
```

Hello Java

How are you?

Java: I am fine.

Word count = 2
